BUILDING TRUST

NEW Sika Carbodur® DESIGN SOFTWARE

Sika's new Carbodur design software has been designed specifically for use by Structural Engineers. The calculations are fully transparent. Usage is intuitive. Updates are automatic. And every Sika Carbodur project designed using this new software is fully compliant to ACI 440.2R.

KEY FEATURES:

- **FULLY COMPLIANT WITH GUIDELINES**
Strictly follows the latest international design guidelines. No use of alternative or non-proven design methods.
- **FULL CONTROL OF THE WHOLE DESIGN PROCESS (NO BLACK BOXES)**
Provides full details on all parameters used, results obtained and verifications made during the design process.
- **REALISTIC AND ACCURATE DESIGN**
Handles the most complex design challenges including variable load distribution on beams, biaxial bending of columns, complex cross sections and a full range of FRP solutions.
- **INTUITIVE USAGE**
Guides the user through the structural strengthening design process, and will stop the design process if a critical design situation is inadvertently created.
- **AUTOMATIC UPDATES**
No risks related to outdated software. Any changes to international design guidelines or the additional design options are automatically updated.
- **FREE DOWNLOAD AND FREE USER GUIDE**
Free of cost once the activation process is completed. A comprehensive user guide is provided free as well.

For more information, and to arrange for a free download, visit lka.sika.com and search "Carbodur Software".
